

Circle.Tech

The new shape of filtration.

The circle represents perfection, the traditional symbol of something that has neither beginning nor end, formed of a single line whose ends join together and cancel each other out. Inspired by this form, Falmecc has developed a new line of hoods that combine extraction and filtration in a single element, allowing maximum efficiency and minimum impact on space.

Circle.Tech Technology

Technical sheet.

Carbon.

Active carbons are materials made principally of carbon in the form of graphite microcrystals, specially treated to create a porous structure with a vast internal surface area. These characteristics make it capable of trapping the molecules of many different types of substance, attracting and absorbing them.

Zeolite.

Zeolite is a mineral with a high capacity for absorbing organic compounds and water vapour. This property is directly due to the microporous nature of its crystalline structure. In addition, the chemical characteristics of zeolite mean that it releases heat on contact with moisture, thus reducing it. The use of zeolite is therefore important both for reducing odours and for absorbing water vapour produced during cooking.

Long-lasting product, simple maintenance.

The Carbon.Zeo combined filter has a long life, lasting at least 3 years, and up to 5 years, under normal conditions of use. We recommend to regenerate the filter every 18 months by placing it in an oven at 200°C for two hours. This process is extremely easy, with extraction performed in the lower part of the hood.

Learn more about our Circle.Tech technology.

Spazio NEW

- Stainless or black-painted steel chassis
- Circle.Tech technology with Carbon.Zeo filters
- Smoked glass shelves
- LED lighting
- Removable and washable metallic grease filter
- Equipped with power outlets and USB ports
- Ladle hanger, spices shelf, tablet holder included
- Indoor plants growing area (optional Falmec accessory)
- Remote control included
- Dialogue System-ready.

Spazio is a system that amplifies the features of a suspended hood. Its versatility is a keypoint that we reached by increasing available room around the hood, allowing use on multiple levels, for a complete and dynamic experience. On the hanging support shelf the plants are a living presence for a real interaction with the "ingredients" necessary for good cooking. The activities on the work surface are facilitated by a hanging rail for all the accessories and by a large lighting surface. The choice to create an air support has increased the capacity of the worktop, with a suspended kitchen area that multiplies its usability both on the horizontal and on the vertical plane, fully adapting to the work in the kitchen.

Vega is a filtering ceiling hood defined by a meticulous care of proportions, that with the use of Falmec Circle.Tech technology, allowed to design a product with extremely simple and light looks. The thin frame, available in different finishes, is separated into symmetrical segments that delineate a vertical visual detail making the product harmonious and delicate. Finally, the perimeter suction and the lower lighting panel define an architectural and rational product suitable for all kitchen environments.
